

SCOPEHOLDING

**- All your code at the same level, rewriting identifiers as necessary to avoid conflicts between variable names.**

-There's no per-module overhead

**-The bundle is guaranteed to be smaller, and will  
also evaluate faster**

# SCOPE HOISTING

- All your code at the same level, rewriting identifiers as necessary to avoid conflicts between variable names.
- There's no per-module overhead
- The bundle is guaranteed to be smaller, and will also evaluate faster

# SCOPE HOISTING

```
(function (global, factory) {  
    typeof exports === 'object' && typeof module !== 'undefined' ?  
    factory() :  
        typeof define === 'function' && define.amd ? define(factory) :  
        (factory());  
}(this, (function () { 'use strict';  
  
    var b = 42;  
  
    console.log( b );  
  
})))
```
