

CODESPOTTING

```
class MyButton extends Component {
```

```
  componentDidMount(){
```

```
    import('moment').then(function(moment) {
```

```
      console.log(moment().format());
```

```
    }).catch(function(err) {
```

```
      console.log('Failed to load moment', err);
```

```
    });
```

```
  }
```

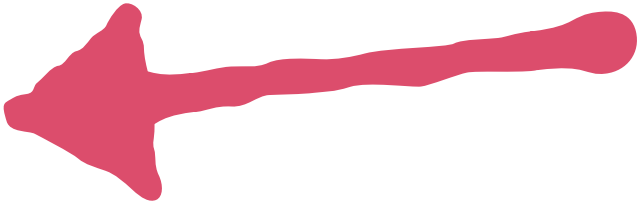

```
  onClick(){
```

```
    alert(moment().format("dddd, MMMM Do YYYY"));
```

```
  }
```

```
  // ...
```

```
}
```

**Not in the main bundle.
It will be loaded
dynamically
only if the component
mounts.**

CODE SPLITTING

```
class MyButton extends Component {  
  componentDidMount(){  
    import('moment').then(function(moment) {  
      console.log(moment().format());  
    }).catch(function(err) {  
      console.log('Failed to load moment', err);  
    });  
  }  
  
  onClick(){  
    alert(moment().format("dddd, MMMM Do YYYY"));  
  }  
  
  // ...  
}
```

**Not in the main bundle.
